

# Bespoke Elevation

## Case Study

**After having a lift inspection and having the existing platform lift condemned this office building needed a new replacement.**

We were contacted to look at a replacement lift as they urgently needed to have a new one fitted and the existing one removed. The managers had spent quite a lot of time researching different options as they were a bit unsure of what to do. They were recommended the Aritco product and spoke to a couple of companies and had a few quote options.

We came to visit the building and discussed the processes and what we can do, we clearly explained the schedule of works and offered the removal. Installation of the new lift and the building finishing off works including electrics as a whole project so we could manage the process for the building and make it as easy as possible for them.

Before

After

The length of time for removal of the old lift, installation of the new lift and finishing off works was estimated as 8 days but due to the building having training booked quite last minute we worked longer hours to streamline the installation and the whole project was complete in just three days.

"Bespoke Elevation took care of everything"

"The new lift is fantastic and a far superior product"

"There was limited disruption, all eventualities had been covered beforehand so there were no shooters and the contract ran extremely smoothly!"

The managers of the building were thrilled with the service we provided and would highly recommend Bespoke Elevation. They also chose to take out an extended warranty as they were so confident with the service provided by our team.

## Product Details

- DDA compliant platform lift - 1100 x 1480mm
- Commercial use
- Option of different sizes
- Load capacity of 410kg/500kg
- Autodialler or wireless intercom
- Fire door option
- Different colour and flooring options
- Quick and worry free installation
- Suitable for existing properties
